

I am a PhD Researcher at UCL **working on high performance computing (HPC) software for problems in science and engineering**. I'm interested in applying HPC to difficult scientific problems, and my research focuses on scaling solvers for Maxwell's equations. I have significant software development experience in data science and machine learning, and have worked in different industries (Manufacturing, Insurance, Automotive). I am active in the open source software community, with contributions (small and large!) to numerous popular data science and numerical libraries, most significantly **ExaFMM**, **Traits**, **Envisage**, **Chaco**, **Numba**, **Scipy**, **Scikit-Learn** and many more, including time being mentored by CPython maintainers while an intern at Enthought.

---

## EDUCATION

### University College London

London, UK

*MSc+PhD Mathematics & Computer Science (MSc with Distinction)*

September 2018 - September 2024

**Focus:** My area of research is **software systems** for large scale **simulation** in **Rust** and **Python**. I write software to take advantage of distributed and heterogeneous hardware (mixed CPU/GPU) for scientific and engineering problems. My research focuses on solutions to the integral and differential equations that arise out of wave-phenomena, for example in electromagnetism, acoustics and other related fields. The goal of my PhD research is to develop simulation software for Maxwell's equations that scales to petascale. I completed my MSc part-time in order to fund my studies through working in the technology industry, and graduated top of my class.

### Durham University

Durham, UK

*MPhys Physics (Upper Second Class Honours)*

October 2013 - May 2017

**Focus:** Theoretical physics, and applied computation.

---

## TECHNOLOGIES

**Languages:** Python (8 years), Matlab (3 years), Rust (2 years), C++/C, JavaScript (1 year), Miranda, Haskell, Go (< 1 year)

**Tools:** **Data Science** (Pandas, Numpy, SciPy, SKLearn, Numba) (5 years), **Distributed Computing** (MPI, OpenMP, Dask) (3 years), **Heterogeneous Computing** (CUDA, OpenCL) (3 years), **Databases** (Postgres, Elasticsearch, MongoDB) (2 years),

**DevOps** (Docker, Singularity, TravisCI) (2 years), **Web Dev** (Flask, FastAPI, AWS, GCP) (1 year), **Deep Learning** (Tensorflow,

Keras) (<1 year), **Frontend** (React, React-Native) (<1year)

---

## INDUSTRIAL EXPERIENCE

### DeGould Automotive

Remote

*Software Engineer*

November 2021-January 2022

- I was a software engineer at a computer vision startup in the automotive industry.
- I worked primarily in **Python**, building ML Ops infrastructure, using **Kubernetes** and **Docker** in order to productionize research outputs.

### Enthought

Cambridge, United Kingdom

*Software Engineer, Intern*

April 2019-September 2019

- I developed **computer vision software** for a client in the semiconductor industry to automate manufacturing defect detection using **Python** with **SciKit-Image**, **Keras** and **PyQT** for development, and **TravisCI** and **Docker** for the build environment.
- I contributed to popular Python open source projects (**Traits**, **Envisage**, **Chaco**), under the guidance of core maintainers of **CPython**.

### Cytora

London, United Kingdom

*Software Engineer*

September 2017-December 2018

- I took ownership of the development of mission critical projects, operating under ambiguity, and changing requirements.
- I lead a team of three to develop greenfield **natural language processing software**, to process data from unstructured and structured source data, using **Python** with **Flask**, **ElasticSearch**, **PostgreSQL**, and **CircleCI**, **Docker** and **GCP** for deployment.

---

## RESEARCH EXPERIENCE

### Flatiron Institute - Simons Foundation

New York, United States of America

#### Summer Research Associate

June 2022-August 2022

- I will be visiting the Centre for Computational Mathematics at the Flatiron Institute this summer, undertaking research in data science, software development, and mathematical computing.

### Cambridge Quantum

Cambridge, United Kingdom

#### Summer Research Associate

June 2017-September 2017

- I was a summer researcher studying algorithms for the next generation of quantum computers where I collaborated with researchers from the University of Cambridge.
- I designed algorithms for compiling simple quantum algorithms on emerging quantum hardware topologies, inspired by classical sorting networks.

### Humboldt University of Berlin

Berlin, Germany

#### Research Intern

June 2016-September 2016

- I was a summer researcher in computational neuroscience, working on models for olfaction in insect brains.
- I implemented neural-data analysis software in Python, and presented the outputs of my work at the Bernstein Conference for Computational Neuroscience.

## PRIZES

[2020] UKRI Doctoral Training Prize, Full PhD Fees and Stipend.

[2019] UCL Enterprise Startup Battlefield, 3rd Place £1500.

[2017] Durham University Hackathon 'Durhack', Best Use of Data £50.

[2016] DAAD Scholarship, Summer Research Prize £2000.

[2014] BP STEM Scholarship, undergraduate funding £20,000.
